About Hanrun paper

As one of Chinese digital printing industry leaders, Hanrun paper was established in 2009 as a one-stop environmental digital printing technology brand.

Hanrun Paper integrates the entire industry from production, supply, sales and after-sales, insists on creating each product with ingenuity, and is determined to lead the development of the global digital printing industry with all partners.

Hanrun Paper's products cover transfer paper, DTF series products, heat transfer and other industrial chains. We have a strong professional team to provide full-round technical after-sales support. Each product line at the Hanrun Paper factory continues a high-level standard operation, ensuring that each order is perfectly delivered to customers. So far, Hanrun Paper has served professional dealers in 170 countries.

DTF ONE-STOP PRINTING SOLUTION

Hanrun paper can provide a complete set of printing solution for our customers. We have DTF printer, powder shaker, DTF films, hot melt powder, DTF color ink and white ink.

Our professional printing solutions bring convenience to our clients and ensure the best effect of the printing results while reducing ink costs during the printing process. With the high print resolutions, text and line art are extremely sharp and clear. Meanwhile, our DTF printing films have obtained the Gost certification, and our DTF ink has passed the OEKO-ECO certification. We always adhere to the guarantee of product quality and corporate responsibility for the environment.

Last but not least, after-sales service is still a link we attach great importance to. We can not only provide relevant technical teaching and product manuals, but also provide online phone calls or video to solve after-sales problems for our customers.

UV ONE-STOP PRINTING SOLUTION

Label printing is not the exclusive domain of traditional screen printing and digital label printers. UV DTF printers have recently become the new hot spot in the label printing industry. UV DTF transfer stickers are widely used in the market to meet the needs of packaging goods, cosmetics, gift boxes, paper bags, cycling helmets, electronic products, etc. Whether it is printing logos, patterns or other labels, small batch customizations can be done by simply tearing the film. It ushers in new business opportunities in the personalized packaging customization market.

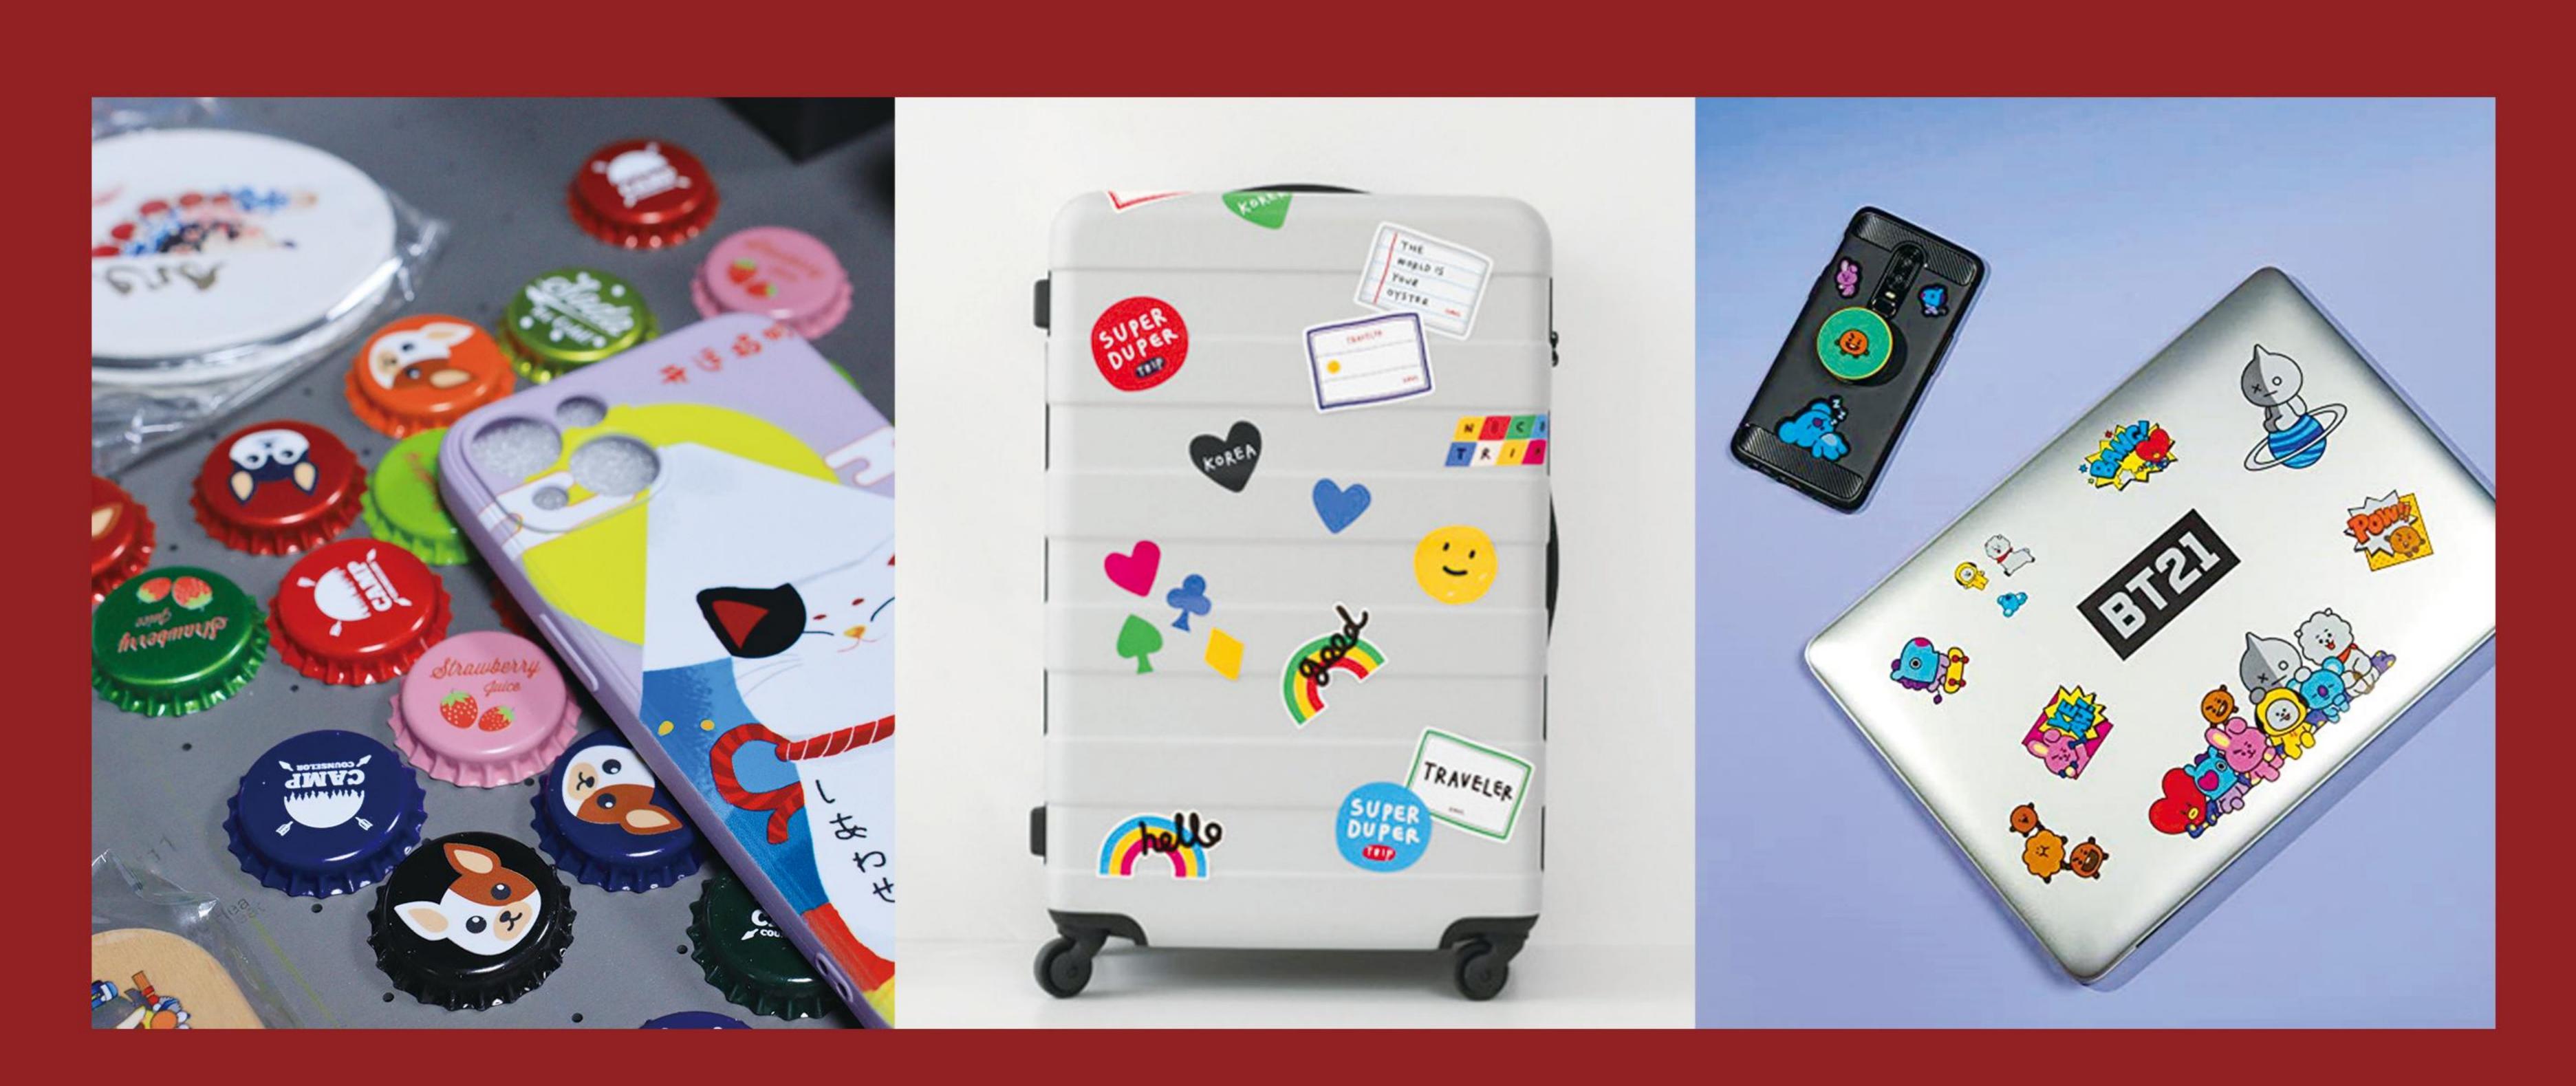

UV DTF printing is a new method that uses UV curing technology to create designs on hard surfaces.

UV DTF printing requires specific UV DTF inks and a UV printer. UV DTF inks contain a photosensitive curing agent that dries quickly when exposed to UV light. The final product is durable and will not scratch or wear off quickly. UV DTF printing technology is the best solution for customizing hard surface printing/labels.

HANRUN SUBLIMATION PAPER

As one of the high-quality suppliers of digital printing materials, Hanrun paper has been committed to providing customers with high-quality and stable product supply for 13 years.

While expanding the production line, we continue to improve the production, inspection, and delivery supply chains. So far, Hanrun paper has served customers in more than 170 countries worldwide.

FOOD WRAPPING PAPER

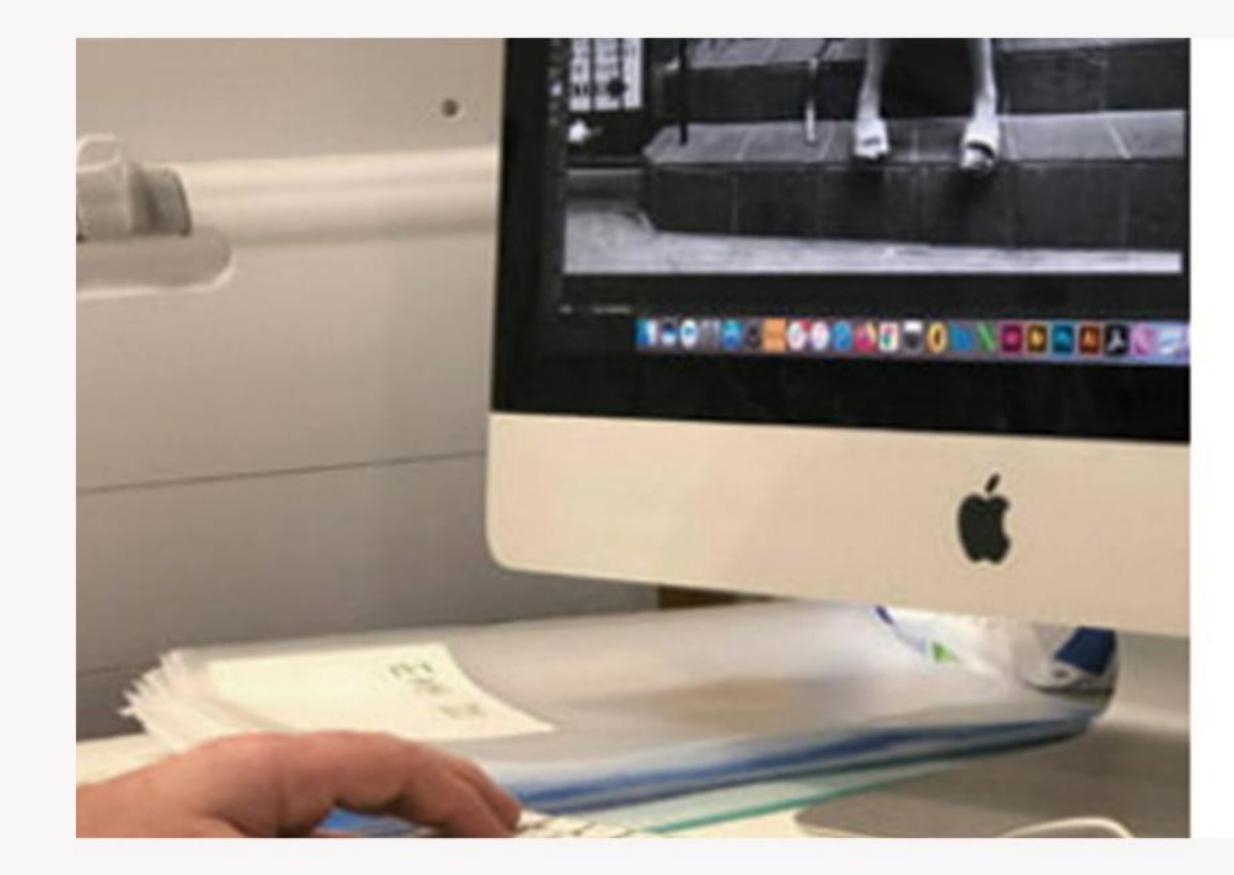

In 2022, Hanrun Paper launches a sub-brand: Nature Paper and a new food packaging paper product line to provide customers with eco-friendly, high-quality, food-grade packaging paper. Existing products include greaseproof paper, baking paper butter paper, freezer paper, etc, and also offer customized services to customers. Now Nature paper has obtained FSC certification and has passed the inspection of FDA and CE food packaging paper-related terms. We are committed to becoming a benchmark in the food packaging paper industry, building a complete ecological supply service chain for food packaging paper management, and promoting green and environmentally friendly food packaging paper.

CUSTOMER CASE

CASE 1 FROM EUROPE

Our European client, John, has been active in printing market for many years, mainly focused on art creation services.

Previously John collaborated with two local paper companies. But in the end, they switched to 120gsm transfer paper of Hanrun paper.

John said that at the moment of the transfer operation, the paper panel expand significantly due to the high temperature during the transfer process, because the local paper is almost inflexible, transferring to a large panel usually results in ghosting at the corners of the panel. But after sample testing, he is very pleased with the elasticity of Hanrun paper's high grammage transfer paper to prevent ghosting effects, which is very important for his company.

CUSTOMER CASE CASE 2 FROM SOUTHEAST ASIA

Our Southeast Asia customer Araya is the manager of a fashion clothing brand. In recent years, she has switched from HTV printing to more environmentally friendly digital printing, so she chose to cooperate with us.

"I think DTF is still a new and vigorous technology with many advantages, such as soft touch, no need pretreatment, perfect color reproduction, environmental friendliness, etc." Araya shares her opinion, "It really is an opportunity for fashion clothing, perfect products that can be customized with high quality."

At the same time, Araya also follows Hanrun Paper's Youtube channel to get the latest solution in the product using, "I always get information of new products and new creations from Hanrun Paper's channel on Youtube, I feel it's such a good way to do some creative things."
