

Anvidine

Features:

1. Wide bactericidal spectrum and strong bactericidal power. Povidone-iodine can kill a variety of bacteria, viruses, spores, fungi and protozoa.
2. Safe and less irritating. Povidone-iodine is quite safe and has little irritation to the skin and mucous membranes of humans and animals.
3. The properties are stable and easy to use. Compared with hydrogen peroxide and acid disinfectants, the properties are more stable.

Indication:

Disinfection and antiseptic. It can kill a variety of bacteria, viruses, fungi, spores, mycoplasma, chlamydia, parasites and eggs, etc. It is used for disinfection of large-scale farms such as pig farms, chicken farms, cattle and sheep farms, etc. . It can also be used for disinfection of livestock and poultry.

Dosage and Administration:

Empty house, with livestock and poultry disinfection: 1:50 times dilution, 300ml per square meter.

Disinfection of livestock and poultry houses and environmental pavement: 1:50 dilution, 100-200ml per square meter.

Disinfection of the door and foot basin outside the livestock and poultry house: diluted at 1:50 and replaced in time.

Drinking water disinfection: 1:1000 dilution.
