

Fuxian

Flunixin Meglumine Injection

INDICATIONS

Used to reduce fever, relieve pain, relieve inflammation in livestock and pigs.

For the control of pyrexia associated with swine respiratory disease.

DOSAGE & ADMINISTRATION

The recommended dose is 2.2 mg/kg BW given by a single intramuscular administration.

The injection should be given only in the neck musculature with a maximum of 10 mL /site.

CAUTIONS

*Follow the prescription of veterinarian.

*Keep out of reach of children.

*Not for use in breeding swine. The reproductive effects of Flunixin Meglumine Injection have not been investigated in this class of swine. Intramuscular injection may cause local tissue irritation and damage. In an injection site irritation study, the tissue damage did not resolve in all animals by Day 28 post-injection. This may result in trim loss of edible tissue at slaughter.

WITHDRAWAL TIME

Meat and offal 12 days
