Oxytetracycline Injection

INDICATIONS

Oxytetracycline Injection is indicated in the treatment of bacterial enteritis (scours, colibacillosis) caused by *Escherichia coli*; pneumonia caused by *Pasteurella multocida*; and leptospirosis caused by *Leptospira pomona*.

In sows, Oxytetracycline Injection is indicated as an aid in the control of infectious enteritis (piglet scours, colibacillosis) in suckling pigs caused by *Escherichia coli*.

DOSAGE AND ADMINISTRATION

A single dosage of 1 ml/10 kg BW administered intramuscularly or subcutaneously.

In severe infections, an additional dose of 1 dose is required 72 hours after the first injection.

If the dose exceeds 20 ml in cattle or 10 ml in pigs should be divided into two doses and injected into two different locations.

CAUTIONS

*Follow the prescription of veterinarian.

*Keep out of reach of children.
