## Features

- DALI or PUSH dimmable
- Standby power consumption <0.35W
- Dim to off without afterglow
- · Supports 2 sets of light fixtures connected in series
- · Output current adjustable via programmer or external resistor
- Supports CLO (constant lumen output)
- Supports logarithmic dimming (default setting) and linear dimming
- Supports corridor function (corridor DIM)
- 5-year warranty (please refer to the warranty condition)

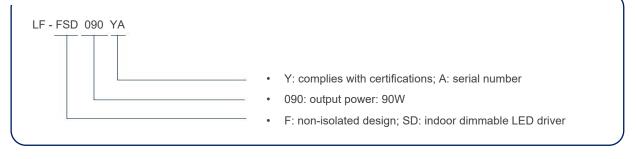

#### **Applications**

· Indoor office lighting · hospital lighting · residential lighting · corridor lighting · others

#### **Descriptions**

LF-FSD090YA is a 90W non-isolated constant current LED driver featuring 90W constant power output. It supports DALI or PUSH dimming or corridor dimming. Its rated input voltage ranges from 220 to 240Vac, output voltage from 54 to 240Vdc and output current from 250 to 1050mA. It is suitable for Class I light fixtures, including linear light, tri-proof light, etc.

| Test<br>Remark    | If there are no special remarks, the above parameters are tested at the ambient temperature of 25°C, humidity of 50%, full load and input voltage of 230Vac/50Hz.  |  |  |

Lifud Technology Co., Ltd.

## Electrical Characteristics

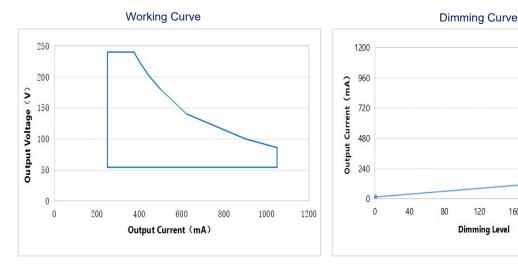

| Additional<br>Remarks | <ol> <li>It is well-advised to install the over voltage protection, under voltage protection and surge protection devices in the power supply circuits of light fixtures to ensure electricity safety.</li> <li>The LED driver used in combination with the end device is one of the accessories of the whole light fixture, and the EMC of the whole light fixture is not only susceptible to the driver itself, but to the LED light fixture and the whole light fixture before the whole light fixture is finished.</li> <li>The test conditions of the circuit breaker configuration quantity are the same as those of the inrush current.</li> <li>The PC cover, casing and end cap for assembling the LED driver in the light fixture must meet the fire rating of UL94-V0 or above.</li> <li>In no-load condition, it is well-advised to not directly connect the LED driver to the light fixture in case that the light fixture is damaged.</li> <li>It is recommended that the withstand voltage of LEDs and aluminum substrates be &gt;3kVac.</li> <li>It is recommended to install double-pole switch at AC input terminal. If user uses the single-pole switch, make sure to connect it to wire L (live wire), otherwise the afterglow of light fixture is grounding, there will be a slight flicker at the moment of power on.</li> <li>Notes: ① When the load voltage of LED and the PCBA is too large, and the light fixture is grounding, there will be a slight flicker at the moment of power on.</li> <li>Notes: ① When the load voltage of LED driver ranges from 54 to 86Vdc, the LED driver outputs with the constant power of 90W.</li> <li>The default current of LED driver is 250mA and its output current has two settings:         <ol> <li>Set by Lifed programmer and DALI programming software</li> <li>Set by Lifed programmer and DALI programming software</li> <li>Set by the external resistor at LEDset terminal</li> <li>When using other DALI masters, please test their compatibilities with Lifu</li></ol></li></ol> |

Wiring of individual light fixture

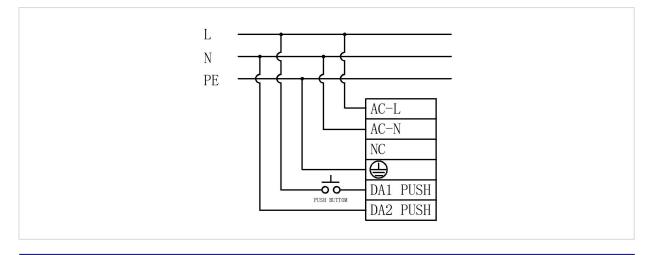

Wiring of double light fixtures

Do NOT connect LED set+ to LED- in case of the damage of LED driver.

## Dimming Operation Instructions

A Choose only ONE as opposed to use DALI or PUSH or corridor dimming at the same time in case of the damage of DALI master.

#### Wiring Diagram of PUSH Dimming

Lifud Technology Co., Ltd.

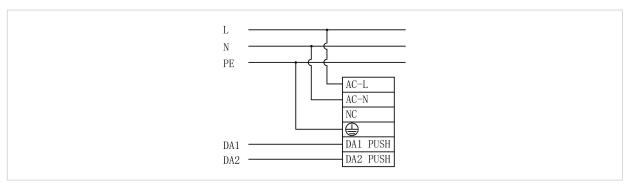

# Dimming Operation Instructions

Operations of PUSH Dimming

| Operation    | Duration       | Function  |
|--------------|----------------|---|
| Instant Push | 0.1-0.5 sec(s) | LED light on/off  |
| Long Push    | 0.6-9 sec(s)   | When light is on, long PUSH to dim up/down  |
| Long Push    | 0.6-9 sec(s)   | Turn off the light via PUSH switch; long press the PUSH button to enable<br>synchronous dimming of all luminaires from the minimum brightness |
| Reset Push   | >15 sec(s)     | Long press the PUSH button to reset the brightness of all luminaires to 50%   |

- The PUSH operation won't cause any variations on LED driver if it's less than 0.1S.
- Connect the PUSH switch in series between AC-L and DALI1 PUSH terminals; short circuit AC-N and DALI2 PUSH terminals.
- Min. dimming depth of PUSH dimming: 1% (@ max. output current)
- The PUSH dimming mode has the memory function in case of any power failure. When powering the LED driver on again, the light will return to the previous state before power failure.
- The present dimming direction of PUSH dimming is opposite to the former one.
- Press for 3+ mins to switch to corridor lighting.

## Wiring Diagram of DALI Dimming

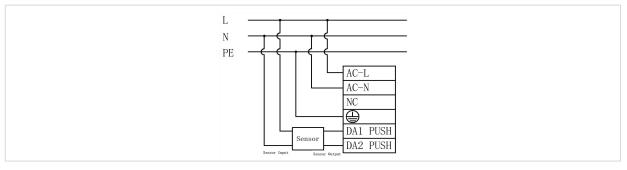

## Operations of DALI Dimming

- Connect DALI signal to DA1 PUSH and DA2 PUSH terminals.
- DALI protocol includes 16 groups and 64 IP addresses.
- Max. number of LED drivers connected in parallel in DALI dimming mode: 64 pcs.
- Min. dimming depth of DALI dimming: 1% (@ max. output current; different masters have different dimming depths).

## Dimming Operation Instructions

Wiring Diagram of Corridor Dimming (switch of sensor)

#### Operations for Entering Corridor Lighting Mode

- Approach 1: use Lifud programmer to enable the driver's corridor lighting mode and set parameters.
- Approach 2: keep pressing PUSH for 3+ mins so as to switch to the corridor lighting mode.
- Approach 3: set the sensor's hold time for 3+ mins (keep moving in the effective sensing area for 3+ mins) to enable the corridor lighting mode.
- Remarks:

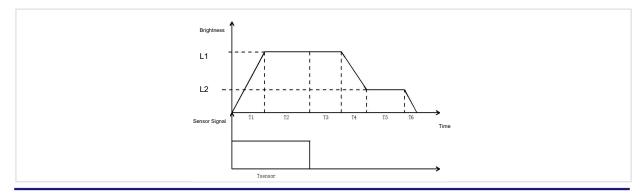

1. Entering: the driver can be switched from PUSH mode to corridor lighting mode by approach 2 and 3, its brightness will dim up to 50%; long press for 3 mins and then it dims down and then dims up, which means the driver has entered the corridor lighting mode.

2. After activating the corridor dimming mode, PUSH DIM is turned off.

## Operations for Exiting Corridor Lighting Mode

- Approach 1: use Lifud programmer to choose other modes and exit corridor lighting mode.
- Approach 2: connect to DALI master and send DALI command, the driver will return to the DALI dimming mode.
- Approach 3: connect to the PUSH switch and continuously press it 10 times within 10 secs, the driver will return to the PUSH dimming mode.
- Remark: The 3-sec or above single press or release will cause the press number (10 times) to be counted as 0.

## Working Process of Corridor Dimming Mode

Lifud Technology Co., Ltd.

# Lifud 辣福德

## LEDset Current Setting Instructions

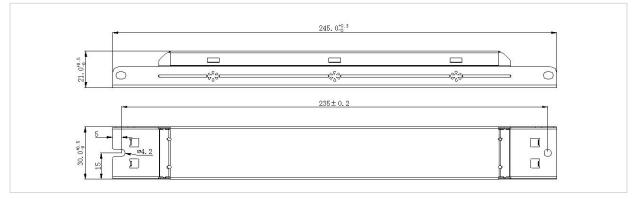

- Default current: 250mA
- Connect 0-4.76KΩ at LEDset, output current: max. current 1050mA;
- Connect 4.76-20KΩ at LEDset, output current: 1050-250mA [reference formula: lout=(5/Rset)\*1000mA; unit of Rset: KΩ]
- Connect 20-100KΩ at LEDset, output current: min. current 250mA
- Connect >120KΩ at LEDset or not connect, output current: default current 250mA

# Structure & Dimensions (unit: mm)

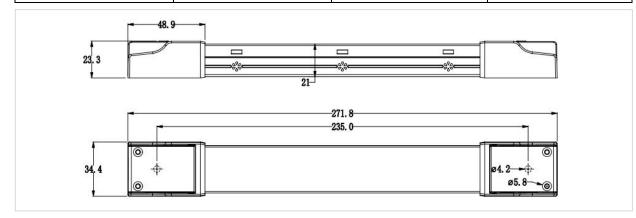

**Product Dimensions** 

| Model                              | Overall Appearance (L*W*H) | Distance Between 2<br>Positioning Holes | Diameter of Positioning<br>Hole |
|------------------------------------|----------------------------|---|---------------------------------|
| LF-FSD090YA(Internal) 245*30*21 mm |                            | 235 mm                                  | 4.2 mm                          |

Structure Diagram

| Model                 | Overall Appearance (L*W*H) | Distance Between 2<br>Positioning Holes (L) | Diameter of Positioning<br>Hole (D) |
|-----------------------|----------------------------|---|-------------------------------------|
| LF-FSD090YA(External) | 271.8*34.4*23.3 mm         | 235mm                                       | 4.2 mm                              |

Remark: End caps should be purchased separately and shipped as accessories.

Lifud Technology Co., Ltd.

## Packaging Specifications

| Model       | LF-FSD090YA                           |
|-------------|---------------------------------------|
| Carton Size | 385*285*210mm (L*W*H)                 |
| Quantity    | 8 pcs/layer; 6 layers/ctn; 48 pcs/ctn |
| Weight      | 0.2kg/pc; 10kg±5%/ctn                 |

## Transportation and Storage

#### 1. Transportation

- Suitable transportation means: vehicles, boats and aeroplanes.
- In transit, it is necessary to prepare awnings for rain or sun protection. Moreover, please keep civilized loading and unloading to prevent the vibration or impact of LED driver as much as possible.

#### 2. Storage

The storage of LED driver shall conform to the standard of Class I environment. When using LED drivers which have been stored for more than 6 months, please re-test them firstly. Do not use them unless they are tested to be qualified.

## Cautions

- Please use Lifud LED driver according to its parameters in the specification, otherwise the LED driver may malfunction.
- Using any incompatible light fixtures or those that have not been certified may cause fire, explosion or other risks.
- Man-made damage is beyond the scope of Lifud warranty service.

Remark: Lifud Tecnology Co., Ltd. reserves the right to interpret any contents of this specification.
